- To participate in the political level of the setting of socioeconomic objectives
- To design, run, develop and control plans, programmes and projects and partake in interdisciplinary groups.

Contents

The syllabus offers, in its professional cycle, various orientations. The MA does not train specialists in specific areas, but adopts the necessary elements to deal with all the areas for which society requires economic answers. The training is built upon two dimensions:

- Mathematics training is a core requirement. The general cycle of the MA involves the study of subjects that constitute the language of economists and which permit the analysis, understanding and communication among professionals.
- The knowledge of legal institutions that regulate public life. Together with the study of the history of worldwide and Argentine economy structuring, of sociologic theory as a contribution to the understanding of the social whole, of economic geography and the contrastive analysis of systems and models of development of different economies as a path to contemporary reality.

Job opportunities

Economists work in the formulation and development of policies, and public and private projects; the analysis and follow up of the national and international economic situation. Graduates can also develop research and teach. They carry out scientific research on the economic and social, worldwide and national economy through theoretical instruments of economic analysis.
